Breakfast Symposium

San Diego

iCMR in congenital heart diseases

The 2018 PICS roundtable workshop has put clear landmarks for the perspective of MRI guidance in pediatric cardiology and created new connections between academia and industry.

The round table delivered several priorities and actions, such as formation of a task force with a clinical branch to define clinical indications and needs on the one hand, and an industry branch to communicate and explore conversion into products.

Follow-up workshop in San Diego

This follow-up workshop in San Diego will present the status on both actions and communicate this to potential new users to enable starting MR guided procedures.

Registration via

Michael Barilla
